

DIVIDEND EXTREME

115 g/l FS

Protective shield to protect
wheat seeds

Active ingredient :-

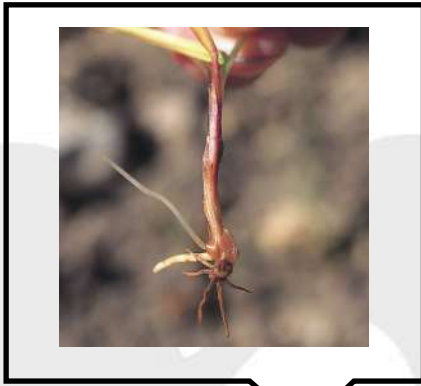

(Mefenoxam (Metalaxyl-M) 23 g/l FS)

(Difenoconazole 92 g/l FS)

Introduction :-

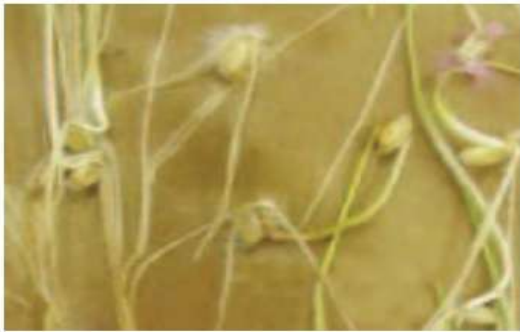

A systemic fungicide with a wide range used in the sterilization of wheat seeds to prevent fungi that affect the seeds of many fungal groups such as loose smut, covered smut, ear blight, spotting disease, scab, and pythium seedling death in wheat and barley crops.

Types of target diseases

Pythium

Fusarium

Untreated Seeds

Treated Seeds

Covered smut

Loose smut

Features Of Using Dividend Extreme

- 1) A specialized chemical formula that works to provide the necessary protection for wheat seeds from fungal diseases that are transmitted through seeds or soil.
- 2) The pesticide has outstanding performance and guarantees crop safety, which makes it the leading pesticide in the treatment of wheat seeds.
- 3) Ensures the basic protection necessary for the plant throughout the growth period.
- 4) It helps in improving production by supporting the establishment of a strong root system and a better germination process for seedlings, which will reflect positively on wheat ears and production in quantity and quality.
- 5) It is safe for users and the environment and has been approved in Canada, the United States of America and the European Union countries.
